

Atlassian Cloud Enterprise

The complete list of enterprise-grade features available in Jira Software, Confluence and Jira Service Management.

Cloud Enterprise is the most advanced cloud offering for Jira Software, Confluence and Jira Service Management. In addition to all the capabilities you get with Cloud Premium, it offers enterprise-grade scale, security and governance controls to help you get the most out of your mission-critical Atlassian products.

- Standardize your various Atlassian products onto a purpose-built cloud platform so you can cost-effectively scale, while also letting your teams customize based on their needs.
- Designed to mirror the way your company is structured, Cloud Enterprise allows you... organization.
- Multiple instances are often provisioned for independent business units, acquired entities or to keep data pinned to specific regions for compliance or to customize based on project configurations, marketplace apps and more.
- Access a centralized hub to manage users across product instances, apply security policies, get usage insights and manage billing. It also allows you to test and control how product configuration changes get rolled out to end-users so you can apply your existing change management practices.
- Work with greater flexibility and agility while providing your administrators with centralized tools to maintain security and compliance across the entire organization.

Scale globally while ensuring highest standards of reliability

With Cloud Enterprise you get:

-  **Unlimited instances** to support complex business needs such as organizational autonomy, data segregation and environment customization.
-  **Simplified per-user licensing model** that allows users access to all enterprise instances of a product with a single license.
-  **Customize Marketplace apps** for specific instances with a smaller subset of users rather than licensing all apps for all users, optimizing app costs.
-  **Highest uptime guarantee** supported by a financially-backed 99.95% SLA, which equates to less than 21 mins of downtime per month.
-  **Enterprise Support** that includes 24/7 support with a 30 minute initial response time for critical issues and phone support from dedicated senior team.

We rely on Jira and Confluence for mission-critical collaboration workflows such as co-ordinating complex supply chains for distributing Covid-19 vaccines. Atlassian Cloud Enterprise enables us to standardize on one cloud platform while enabling our various subsidiaries and business units to customize instances based on specific workflows, apps and more.

LEADING HEALTHCARE COMPANY

Peace of mind with built-in security and compliance

Security is an essential ingredient in Atlassian cloud products. It offers you built-in tools to meet data privacy obligations around the globe and safeguard user accounts to minimize data breaches, including:

- Encryption in transit and at rest
- Compliance certifications*

SOC-2, SOC-3 (System and Organization Controls)

ISO/IEC 27001 (Information Security Management Systems)

ISO/IEC 27018 (protection of personally identifiable information (PII) in public clouds)

VPAT 508 (Voluntary Product Accessibility Template)

PCI DSS (Payment Card Industries Data Security Standard)

GDPR (General Data Protection Regulation)

- Data Residency - ability to pin data to the United States or the European Union region with plans to expand support to additional regions including Australia, Japan, the United Kingdom, Canada, and India.

- Included Atlassian Access features at no additional cost:

- SAML-based Single Sign-on (SSO)
- Organization Audit logs to triage anomalous activities
- Active Directory sync with Okta, Azure, OneLogin and more
- Enforced two-step verification
- API token controls to view and manage API access
- Authentication policies to customize settings based on users
- Security integrations (CASB) to monitor for suspicious activities

Centralized governance controls for user and change management at scale

Cloud Enterprise offers organizational level administrators with tools to centrally govern how employees use Atlassian products as well as enable a controlled change management strategy:

Centralized Admin Hub where administrators can assign users across various product instances, manage access permissions, customize instances with specific marketplace apps or workflows, apply security policies; check usage and billing.

Automated User-Provisioning and De-Provisioning with built-in integrations to leading identity providers to save admin time and hassle.

Organization Insights to track usage and make data-driven decisions to increase adoption.

Sandbox is a safe, isolated environment where production data can be cloned and upcoming changes can be tested before releasing to the production environment.

Release Tracks gives administrators the option to batch releases to the production environment in a fixed time window so they get sufficient time to document and prepare end-users.

Before, I had six people that spent 90% of time on care and feeding for the app. Now we can do it with one person, part time. It's night-and-day better.
